

Lukas Kouril

Senior Software Engineer

I lead frontend and full-stack work across banking, AI tooling, and product teams, turning complex requirements into accessible, maintainable systems. My background spans customer operations, fraud prevention, regulatory work, IoT incident analysis, and software engineering. That path taught me to understand systems from both sides: how they are built, and what happens when real people depend on them.

01 / EXPERIENCE

Engineering experience

Web Integrator

Senior Frontend Engineer

Apr 2026–Present
Prague, Czech Republic

Lead frontend work and help the team adopt AI tooling with clear conventions, while keeping accessibility, web standards, and maintainable delivery visible in day-to-day decisions.

- Joined as the first engineer on the team with an explicit AI-tooling focus and established practical conventions for its use.
- Lead frontend delivery in TypeScript, React, and Next.js, including code quality and cross-browser behavior.

EmbedIT

Senior Fullstack Developer

Jul 2025–Mar 2026
Prague, Czech Republic

Led frontend and BFF work within the modernization of an online-banking platform, helping migrate legacy functionality toward a micro-frontend architecture.

- Built BFF controllers, mappers, and service orchestration.
- Designed API contracts and kept integrations stable across downstream services.

Ersilia

Fullstack Developer

Jan 2024–Jun 2025
Barcelona, Spain

Built a full-stack application for structured machine-learning model metadata and an AI-assisted scientific-PDF workflow within an open-science team.

- Designed the database schema and backend for structured model metadata.
- Built the Next.js and TypeScript application used to manage the workflow.

beKind

Frontend Developer

Feb 2023–Dec 2023
Barcelona, Spain

Built the frontend of a B2B marketplace connecting charities and corporations, and carried a company rebrand into the production product.

- Structured the frontend around reusable React and Tailwind CSS components.

Take a Break

Full Stack Developer

Apr 2022–Jan 2023
Barcelona, Spain

Built a B2B meditation-booking application across product UI, data, payments, authentication, and deployment.

- Built booking, dashboard, achievement, and content interfaces in Next.js and TypeScript.

02 / CONTEXT

Experience beyond code

Controlant

Technical Analyst

Sep 2019–Mar 2022
Reykjavík, Iceland

Investigated critical cold-chain incidents using live IoT telemetry for pharmaceutical shipments.

Entain Group

User Protection Expert

Dec 2017–Aug 2019
Gibraltar

Investigated fraud, money-laundering patterns, and user-protection risks in a regulated environment.

Kiwi.com

Customer Relations Advisor

Dec 2014–Nov 2017
Brno, Czech Republic

Resolved complex booking failures across airline and CRM systems for customers and B2B partners.

03 / INDEPENDENT PRODUCT

devShark

A learning platform for developers built as a real product rather than a UI demo. It combines structured learning content, quiz mechanics, progress tracking, and multiplayer functionality in a maintainable React and Supabase architecture.

04 / WORKING PRINCIPLES

Boundaries, evidence, maintainability

Keep downstream complexity behind explicit contracts. Treat accessibility and testing as delivery requirements. Investigate failure modes, communicate tradeoffs, and validate AI-assisted work before it reaches people or repositories.

Core capabilities

Product frontend

React · TypeScript · Next.js · Accessible UI · Design systems · Responsive interfaces · Frontend architecture

Application architecture

BFFs · API contracts · Micro-frontends · Authentication · Integration boundaries · Data and state ownership

Backend and data

Node.js · PostgreSQL · Schema design · Integrations · Background workflows · Supabase

Quality and delivery

Unit testing · Integration testing · E2E testing · Accessibility testing · Performance · CI/CD · Code review · Maintainability

Selected tools

Payload CMS · Supabase · Prisma · Ably · Vercel AI SDK · Anthropic SDK · GitHub Actions · Vercel

Education

arol.dev

Computer Software Engineering
Jan 2024–Jun 2024

Reykjavik Academy of Web Development

Web Development
Feb 2022–Jun 2022
